Charging The Headset:

1. This headset includes a built-in Lithium Polymer battery.
2. To charge the unit:
3. Plug the charger into proper outlet.
4. Plug the unit end of charger into the power outlet of headset.
5. During charging, the indicator light will turn red. When charging is complete, the indicator light will shut off or flash red to alert you that the headset is fully charged.

Notice:

If disconnection occurs, please check the following factors:
1. Ensure that the headset has enough power, is turned on and has been successfully paired to the mobile.
2. The Bluetooth function of the mobile is enabled.
3. Check whether the ranger between the headset and mobile is over 10 meters, or there is wall or other disturbance or other electrical devices between headset and mobile.

Battery information:

Your device is powered by a rechargeable battery .The full performance of a new battery is achieved only after two of three complete charge and discharge cycles .The battery can be charged and discharged hundreds of times, but it will eventually wear out. Please cut the connection between charger and headset when not charging .Do not leave a fully charged battery connected to a charger since overcharging may shorten battery lifetime. If left unused, a fully charged battery will lose power with time past. Leaving the device in hot or cold places, Such as in closed car in summer or winter conditions , will reduce the capacity and lifetime of the battery .Always try to keep the battery between 15and 25.A device with a hot or cold battery may not work temporarily, even when the battery if fully charged. Battery performance is particularly limited in temperatures well below freezing .Do not dispose of batteries in a fire as they may explode .Battery may also explode if damaged.
