- Do not charge in the following areas: direct sunlight; the outside temperature is below 50C or above 400C areas; humidity, dusty places or where vibration (may cause failure); TV, radio and other electrical appliances in the vicinity (will affect the image, sound effects).

Chapter 2 　before use

2.1 Technical parameters

Host

108.6x48X16.5（mm）

Nominal voltage	3.7V
Charge limit voltage	4.2V
Rated Capacity	1100mAh

1, projection lens; 2, before the cameras; 3 volume keys; 4, projection switch key; 5 navigation keys; 6, shortcut function keys; 7, audio player shortcut keys; 8, SIM card 1, card 2 dial key; 9, ＊ key; 10, USB and charging interface; 11, the handset; 12, OK button; 13, return key; 14, TV shortcuts; 15, hook key; 16, the number keys; 17, ＃ key; 18 , Mike; 19, TV antenna; 20, focusing ring; 21, after the cameras; 22, flash; 23, the battery cover; 24, speaker holes

2.2 SIM card

You must use the phone before the phone's SIM card inserted in an effective, SIM card into the digital GSM network of your keys.

And the establishment of network connections of all relevant information, and initialize your call records are recorded in the SIM cards of the metal surface area, with record cards are your SIM cards in the phone book to store and receive a name, phone number and short messages, SIM cards can be removed from your mobile phone, a GSM mobile phone into any use (the new phone to automatically read the SIM card)....

In order to prevent loss and damage card information, should avoid touching the metal surface area, and away from the SIM card on the electric, magnetic place. Once the SIM card is damaged, you will not have access to GSM networks.

Note: be sure to remove the SIM card before the phone off. There is absolutely prohibited in the case of an external power source connected to insert or remove a SIM card, or SIM card may be damaged.

SIM card insertion and removal

➢ SIM card in a card in general, in the assembly, you must carefully remove it.

➢ off the phone, remove the battery and other external power supply.

➢ the SIM card into the SIM card seat.

➢ When you need to remove the SIM card, first shut down, removing its battery, then remove from the SIM card connector SIM card.

Note: If the SIM card inserted wrong or SIM card is corrupted, the boot will show "Please insert the SIM card." Remove the SIM card after shutdown, check the correct path to re-insert the plug.

If the display SIM card is permanently locked, contact your network operator.

2.3 T-Flash Card

This machine supports the use of T-Flash memory card.

Note: T-Flash cards are small objects, please do not let children touch, so as not to be swallowed mouth!

How to install T-Flash (memory) card

Before the start following, be sure to turn off the phone, unplug the charger, remove the battery.

First open the T-Flash card plugs into the T-Flash card slot, put in place together on the T-Flash card can be tied.

2.4 Battery

1. Under normal circumstances you¬ can display the battery icon in the upper right corner shows the remaining battery power.

2. When the battery is low, the¬ screen shows "battery low." If the profile of the warning sound is turned on, also issued a warning beep.

3. initial state battery charge about 50% of the electricity, opening them to use. New battery charging at least 14 hours, to be thoroughly used up first (power consumption and fail to

boot) and then fully charged before use; the second time also thoroughly used up before full power, so that three consecutive cycles, the battery was easy to achieve the best use of the state.

Note: The actual standby and talk time and phone usage and the local network environment, SIM card and cell phone real settings.

2.5 Remove the battery and installation

1. Remove the following steps¬ when: ① downward push the back cover; ② downward lift the battery out.

2. installation, follow these¬ steps: ① the battery into the battery slot card; ② Push the back cover up to clamping.

Battery charge

1. the charger plugged.

2. the charger connector is¬ properly inserted in the phone charging interfaces. Then, the phone battery indicator top right corner of the screen will flash cycle: If charging has been shut down, the charging indicator will appear on the screen picture, the battery charging. If the phone is still in the excessive use of power is low, the charge may be required after the beginning of a period of time before the charging indicator appears on the screen.

3. When the screen upper right¬ corner of the battery indicator shows full, and no longer flashing, indicating that charge has been completed. The process usually takes 3 ~ 4 hours. During charging, batteries, cell phone and charger become hot, is normal.

4. charge and¬Upon completion disconnect the AC power outlet to connect the phone and charger. If you do not have to disconnect the charger with power and phone, then after quite a long time (about 5-8 hours), battery power consumption to a certain extent, cell phone began charging. We recommend that you do this operation because it will be your battery performance and life of some impact.

Note: The charge must be placed when the temperature is +5 C ~ +40 C for ventilation, and must use the charger provided by manufacturer, the use of an unapproved charger may be dangerous, and breach of the phone recognition and warranty.

When the phone is automatically turned off, or show running low warning "battery low", they shall charge the battery. If the battery does not run out before charging the phone will automatically reduce the charging time.

The mobile phone manufacturers to provide standby and talk time is based on the ideal working environment. In actual use, the battery life as the network conditions, working conditions and patterns of use vary.

Please make sure the battery is charging installed, remove the battery can not charge.

2.5 Startup and Shutdown

1. Press and hold button, open the¬ phone, the screen shows the boot animation; long this button, turn off the phone.

2. If you first open the phone, but did not insert the SIM card, the phone will prompt you to insert the SIM card, insert the SIM card, the phone will automatically test the SIM card is available.

3. Then the display will sequence¬ the following tips:

- Enter PIN (if you set a SIM card password, please read the paragraph "Security Settings" to understand the details of operation)

- Enter the phone password (if you set the phone lock code)

4. SIM card decryption is¬ successful, the phone automatically searches for available network (the screen to find the network).

Once contacted, the network provider's name will appear in the top of the screen. At this point that the normal phone into standby, can be properly used.

Note: If the screen prompts "can make emergency calls (Emergency)", means that you have in the normal network coverage (service area) outside, but you can still send an emergency call signal strength.

2.6 using the USB storage function

Before use Note:

1. Please connect USB devices to¬ maintain the correct and stop the USB device operations.

2. Do not use the windows format command on the machine mobile disk format operation, otherwise it will cause irreparable damage.

3. USB Operating Environment:¬

   ★ windows2000/xp.

   ★ For other operating systems, may need to install USB drivers can be successfully established PC-connected to the phone.

Powered on, insert USB connected computer, the phone prompts three options:

4. Storage devices: Select this¬ option, the access to a computer in my computer "Removable Disk", operable mobile phone and computer data transmission.
